MIXING

1. Use directly from original packaging or prepare in a container that is clean and free of foreign substances. Do not use a container which has contained or been cleaned with a petroleum-based product.
2. Mix MasterSeal® AWB 660 with a clean, rust-free paddle and drill until thoroughly blended. Dilution of MasterSeal® AWB 660 is not recommended.
3. Additives are not permitted.
4. Close container when not in use.
5. Clean tools and equipment with water immediately after use. Dried material can only be removed mechanically.

PRODUCT CONSIDERATIONS AND JOB CONDITIONS

- Cold temperature application less than 40 °F (4 °C) down to 25 °F (-4 °C): expect extended dry time. Final air/water-resistive properties and film durability rely on temperatures rising above freezing (32 °F/0 °C)
- Do not apply MasterSeal® AWB 660 in ambient temperatures below 25 °F (-4 °C) or onto substrates below 25 °F (-4 °C).
- Walls shall be capped to prevent moisture and precipitation from entering wall during construction.
- Treat expansion joints with MasterSeal AWB 970 NP flashing membrane, provide sufficient slack in MasterSeal AWB 970 NP at joint to allow for movement.

SURFACE PREPARATION

Substrate shall be dry, clean, sound and free of release agents, paint or other residue or coatings. Verify substrate is flat, free of fins or planar irregularities greater than 6.4 mm in 3 m (1/4" in 10'). Unsatisfactory conditions shall be reported to the general contractor and corrected before application of apply MasterSeal® AWB 660.

EQUIPMENT

Use a 20 mm (3/4") nap roller or paint brush. If spraying, refer to Spray Application of apply MasterSeal® AWB 660 / MasterSeal® AWB 660 I/ MasterSeal® AWB 665/ MasterSeal® AWB 600 FL technical bulletin for spray application equipment and application instructions.

Note: If using roller application, it is necessary to pre-wet the synthetic roller pad with water and spin out the excess water. The

pre-wetting only needs to be done once at the start of application.

PROCEDURE

1. Substrate shall be of a type acceptable by Master Builders Solutions and shall be installed per substrate manufacturer's instructions and local code requirements.
2. Apply MasterSeal® AWB 660 and/or apply MasterSeal® AWB 900 Liquid Flashing Membrane to fasteners, sheathing joints, and rough openings as outlined in apply MasterSeal® AWB Application Guidelines for Joint Treatment and Flashing Rough Openings on Framed Construction technical bulletin or apply MasterSeal® AWB Application Guidelines for Flashing Rough Openings on Concrete and Masonry Construction technical bulletin.
- 3.A. Immediately place and center MasterSeal® AWB 971 FIB over wet MasterSeal® AWB 660 at knot holes and check cracks that may exist in plywood or OSB. Completely saturate MasterSeal® AWB 971 FIB with MasterSeal® AWB 660.
B. If using roller, brush, or trowel application, allow to dry to the touch before applying MasterSeal® AWB 660 to entire wall surface. If spraying, "wet on wet" application is acceptable.
4. Refer to Spray Application of MasterSeal® AWB 660 / MasterSeal® AWB 660 I/ MasterSeal® AWB 665/ MasterSeal® AWB 600 FL technical bulletin for spray application equipment and application instructions.
- 5.A. Apply MasterSeal® AWB 660 to DensGlass™ exterior sheathing, eXP™ sheathing, GlasRoc® sheathing, Securock™ glass-mat sheathing, Weather Defense™ Platinum sheathing, GreenGlass® sheathing, PermaBase™ cement-board by National Gypsum and other cementboards (ASTM C1325 Type A Exterior), gypsum sheathing (ASTM C79/ASTM C1396) and concrete with a 20 mm (3/4") nap roller, stainless steel trowel, brush or spray gun to a consistent, minimum 10 wet mil thickness that is free of voids and pin holes. A fully loaded roller pad is required to obtain a consistent, minimum 10 wet mil thickness.
B. Apply MasterSeal® AWB 660 at a minimum of 10-mil wet film thickness on concrete/masonry substrates that

have received a fully cured application of MasterSeal® AWB 600 FL Block Filler. For concrete/masonry substrates that have not been treated with MasterSeal® AWB 600 FL Block Filler, two (2) minimum 10-mil applications of MasterSeal® AWB 660 are required. Note: Lightweight CMU or other CMU with high porosity may require additional MasterSeal® AWB 660 to produce an acceptable result.

C. Apply MasterSeal® AWB 660 to plywood and OSB sheathing using a 20 mm (3/4") nap roller or spray to a consistent, minimum 10-mil wet film thickness.

Visually inspect to determine whether the sheathing surface is fully coated and free of voids and pinholes. Repair as required to produce a continuous coating. Apply a second 10 ml wet film coat of MasterSeal® AWB 660 to produce a total wet film thickness of 20-mils.

D. Visually inspect the MasterSeal® AWB 660 for voids, pinholes, surface deficiencies, etc. Repair deficiencies and areas that are not intact. Apply additional MasterSeal® AWB 660 as necessary such that MasterSeal® AWB 660 is free of voids, pinholes, etc. All sheathing joints, terminations, inside and outside corners must be reinforced with 4" or 9" MasterSeal® AWB 971 FIB or MasterSeal® AWB 970 NP 4, 6 or 9.

Drying Time

40 °F (4 °C) and rising: allow to dry completely, typically 2-10 hours before proceeding with cladding installation.
40 °F (4 °C) down to 25 °F (-4 °C): when applied at a 10-mil wet film thickness, typically dry in approximately 12 hours at 32 °F (0 °C) and 50% relative humidity (RH). When applied at a 20-mil thickness (single pass spray), typically dry in approximately 18 hours at 32 °F (0 °C) and 50% (RH). Allow to dry completely prior to proceeding with cladding installation.

Note: Actual drying time will vary depending on ambient and substrate temperature, humidity and the ability of the substrate to absorb water. Final air/water-resistive properties and film durability rely on temperatures rising above freezing (32 °F/0 °C).
