

# DURAL HS GEL

## HIGH STRENGTH EPOXY GEL FOR ANCHORING AND DOWELING

### PACKAGING

21.2 oz (627 mL) dual cartridge  
(case of 12)

Code: 070HS 94

53 oz (1.6 L) cartridge  
(case of 6)

Code: 070HS 96 (MTO)

### CLEAN UP

Clean tools and application equipment immediately with acetone, xylene, or MEK. Clean spills or drips with the same solvents while still wet. Hardened DURAL HS GEL will require mechanical abrasion for removal.

### SHELF LIFE

28 months in original, unopened package  
Store between 40 and 95 °F (4 to 35 °C)

### SPECIFICATIONS AND COMPLIANCES

- Complies with ASTM C881-14 Types I, II, IV, and V, Grade 3, Classes A, B, and C
- Meets the requirements of AASHTO M 235
- U.S. DOT Not Regulated (non-corrosive)

### DESCRIPTION

DURAL HS GEL is a two component, 1:1 mix ratio, structural epoxy system that offers exceptional strength in anchoring and doweling applications and can be installed from 40 to 110 °F (4 to 43 °C). DURAL HS GEL has been tested in accordance with ASTM E488 and ASTM E1512 for its ability to resist static, dynamic, seismic and wind loads in uncracked concrete for both threaded rod and rebar.

### PRODUCT CHARACTERISTICS

#### FEATURES/BENEFITS

- Moisture insensitive - allowing installation and curing in damp environments
- Withstands freeze-thaw conditions
- Little to no odor
- High modulus
- DOT Not Regulated (non-corrosive)

#### PRIMARY APPLICATIONS

- Anchoring threaded rods, bolts and rebar dowels into uncracked concrete
- Short and long term tensile anchoring
- Grouting dowel bars and tie bars
- Pick-proof sealant for jails/prisons and kennels
- Bonding agent for fresh to hardened concrete, and hardened to hardened concrete

#### APPEARANCE

Part A liquid is white in color and Part B liquid is black in color.

#### COVERAGE

One 21.2 oz (627 mL) cartridge yields 38.3 in<sup>3</sup> (627.6 cm<sup>3</sup>) of epoxy

One 53 oz (1.6 L) cartridge yields 97.6 in<sup>3</sup> (1,600 cm<sup>3</sup>) of epoxy

## TECHNICAL INFORMATION

The following are typical values obtained under laboratory conditions. Expect reasonable variation under field conditions.

### PERFORMANCE OF DURAL HS GEL TO ASTM C881-14

Test Method Property		Result at Conditioning Temperature		
		Class A 38 °F (3 °C)	Class B 50 °F (10 °C)	Class C 75 °F (24 °C)
ASTM C881	Consistency	< 1/4" (6.4 mm)		
ASTM C881	Pot Life	13 minutes		
ASTM C881	Gel Time (60g mass)	38 minutes	20 minutes	14 minutes
ASTM C882	Bond Strength	2 days: 2,850 psi (19.7 MPa) 14 days: 2,790 psi (19.2 MPa)	2 days: 3,300 psi (22.8 MPa) 14 days: 4,090 psi (28.2 MPa)	2 days: 3,580 psi (24.7 MPa) 14 days: 3,940 psi (27.2 MPa)
ASTM D570	Water Absorption	14 days: 0.53%		
ASTM D648	Heat Deflection Temperature	7 days: 132 °F (56 °C)		
ASTM D2566	Linear Coefficient of Shrinkage	0.002		
ASTM D695	Compressive Modulus	7 days: 209,000 psi (1,441 MPa)	7 days: 211,000 psi (1,455 MPa)	7 days: 244,000 psi (1,682 MPa)
ASTM D695	Compressive Yield	7 days: 10,860 psi (74.9 MPa)	7 days: 10,490 psi (72.3 MPa)	1 day: 11,430 psi (78.8 MPa) 2 days: 11,480 psi (79.2 MPa) 3 days: 11,440 psi (78.9 MPa) 7 days: 11,410 psi (78.7 MPa)

1. Results are based on testing conducted on a representative lot(s) of product. Results will vary according to the tolerances of the given property
2. Results may vary due to environmental factors such as temperature, moisture and type of substrate
3. Pot life is measured as the workable time of 1 gallon (3.8 L) of DURAL HS GEL when mixed at 75 °F (24 °C)

### DURAL HS GEL CURE SCHEDULE

Substrate Temperature	Working Time	Full Cure Time
40 °F (4 °C)	36 min	72 hr
75 °F (24 °C)	20 min	24 hr
110 °F (43 °C)	12 min	18 hr

1. Working and full cure times are approximate and may be linearly interpolated between listed temperatures
2. Substrate and ambient air temperature should be from 40 to 110 °F (4 to 43 °C)
3. When ambient or substrate temperature is below 70 °F (21°C), condition the DURAL HS GEL to 70 to 75 °F (21 to 24 °C) prior to use

### DURAL HS GEL IN-SERVICE CHART

Base Material Temperature	Allowable Load Capacity Reduction Factor
35 °F (2 °C)	1.00
70 °F (21 °C)	1.00
110 °F (43 °C)	0.91
135 °F (57 °C)	0.80
150 °F (66 °C)	0.80
180 °F (82 °C)	0.66

Reduction factors may be linearly interpolated between listed temperatures

**WARRANTY:** The Euclid Chemical Company ("Euclid") solely and expressly warrants that its products shall be free from defects in materials and workmanship for one (1) year from the date of purchase. Unless authorized in writing by an officer of Euclid, no other representations or statements made by Euclid or its representatives, in writing or orally, shall alter this warranty. EUCLID MAKES NO WARRANTIES, IMPLIED OR OTHERWISE, AS TO THE MERCHANTABILITY OR FITNESS FOR ORDINARY OR PARTICULAR PURPOSES OF ITS PRODUCTS AND EXCLUDES THE SAME. If any Euclid product fails to conform with this warranty, Euclid will replace the product at no cost to Buyer. Replacement of any product shall be the sole and exclusive remedy available and buyer shall have no claim for incidental or consequential damages. Any warranty claim must be made within one (1) year from the date of the claimed breach. Euclid does not authorize anyone on its behalf to make any written or oral statements which in any way alter Euclid's installation information or instructions in its product literature or on its packaging labels. Any installation of Euclid products which fails to conform with such installation information or instructions shall void this warranty. Product demonstrations, if any, are done for illustrative purposes only and do not constitute a warranty or warranty alteration of any kind. Buyer shall be solely responsible for determining the suitability of Euclid's products for the Buyer's intended purposes.

## TECHNICAL INFORMATION

### DURAL HS GEL ULTIMATE AND ALLOWABLE TENSION LOADS FOR THREADED ROD IN NORMAL WEIGHT CONCRETE

Threaded Rod Diameter, inches	Nominal Drill Bit Diameter, inches	Embedment Depth, inches (mm)	Tension Load Based on Bond Strength/Concrete Capacity				Allowable Tension Load Based on Steel Strength

18 1/2	470							0.97
19 3/4	502							1.00

1. Minimum slab thickness equals 1.5 x embedment depth
2. Linear interpolation may be used for intermediate edge distances

**WARRANTY:** The Euclid Chemical Company ("Euclid") solely and expressly warrants that its products shall be free from defects in materials and workmanship for one (1) year from the date of purchase. Unless authorized in writing by an officer of Euclid, no other representations or statements made by Euclid or its representatives, in writing or orally, shall alter this warranty. EUCLID MAKES NO WARRANTIES, IMPLIED OR OTHERWISE, AS TO THE MERCHANTABILITY OR FITNESS FOR ORDINARY OR PARTICULAR PURPOSES OF ITS PRODUCTS AND EXCLUDES THE SAME. If any Euclid product fails to conform with this warranty, Euclid will replace the product at no cost to Buyer. Replacement of any product shall be the sole and exclusive remedy available and buyer shall have no claim for incidental or consequential damages. Any warranty claim must be made within one (1) year from the date of the claimed breach. Euclid does not authorize anyone on its behalf to make any written or oral statements which in any way alter Euclid's installation information or instructions in its product literature or on its packaging labels. Any installation of Euclid products which fails to conform with such installation information or instructions shall void this warranty. Product demonstrations, if any, are done for illustrative purposes only and do not constitute a warranty or warranty alteration of any kind. Buyer shall be solely responsible for determining the suitability of Euclid's products for the Buyer's intended purposes.

---

## DIRECTIONS FOR USE

**Drilling and Cleaning Holes:** Using a rotary hammer drill, and a bit that conforms to ANSI B212.15 and is the appropriate size for the anchor diameter to be installed, drill the hole to the specified embedment depth. Always wear appropriate personal protection equipment (PPE) for eyes, ears & skin and avoid inhalation of dust during the drilling and cleaning process. Refer to the Safety Data Sheet (SDS) for details prior to proceeding.

Remove any standing water from hole prior to beginning the cleaning process. Using oil free compressed air with a minimum pressure of 80 psi, insert the air wand to the bottom of the drilled hole and blow out the debris with an up/down motion for a minimum of 4-5 seconds.

Select the correct wire brush size for the drilled hole diameter, making sure that the brush is long enough to reach the bottom of the drilled hole. Reaching the bottom of the hole, brush in an up & down and twisting motion. The brush should contact the walls of the hole. If it does not, the brush is either too worn or small and should be replaced with a new brush of the correct diameter. Blow the hole out once more to remove brush debris using oil free compressed air with a minimum pressure of 80 psi. Visually inspect the hole to confirm it is clean. If installation will be delayed for any reason, cover cleaned holes to prevent contamination.

**Preparing Cartridges:** Remove the protective cap from the DURAL HS GEL cartridge and insert the cartridge into the dispensing tool. Before attaching static mixer, balance the cartridge by dispensing a small amount of material until both components are flowing evenly. Only after the cartridge has been balanced, attach the static mixer to the cartridge. Take note of the air and base material temperatures and review the working/full cure time chart prior to starting the injection process.

Dispense the initial amount of material from the mixing static mixer onto a disposable surface until the product is a uniform gray color with no streaks, as adhesive must be properly mixed in order to perform as published. Dispose of the initial amount of adhesive prior to injection into the drill hole. When changing cartridges, never re-use static mixers. A new static mixer should be used with each new cartridge.

**Installation and Curing:** Insert the static mixer into the bottom of the hole and fill from the bottom to the top approximately two-thirds full, being careful not to withdraw the nozzle too quickly as this may trap air in the adhesive. When using a pneumatic dispensing tool, ensure that pressure is set at 90 psi maximum. Do not disturb, torque or apply any load to the installed anchor until the specified full cure time has passed. The amount of time needed to reach full cure is base material temperature dependent. Refer to the Cure Schedule table for the full cure time.

Prior to inserting the threaded rod or rebar into the hole, make sure it is clean and free of oil and dirt and that the necessary embedment depth is marked on the anchor element. Insert the anchor element into the hole while turning 1-2 rotations prior to the anchor reaching the bottom of the hole. Excess adhesive should be visible on all sides of the fully installed anchor. For horizontal installations, wedges should be used to center and support the anchor while the adhesive is curing. Use extra care with deep embedment or high temperature installations to ensure that the working time has not elapsed prior to the anchor being fully installed.

**Setting ports & sealing cracks:** Place a small amount of mixed DURAL HS GEL on the back of the port and carefully place it centered over the crack. Be careful to not fill the hole of the injection port. Place neat DURAL HS GEL over the face of the cracks to be pressure injected, and around each injection port. Allow DURAL HS GEL to sufficiently harden before injecting, to prevent blowouts.

---

## PRECAUTIONS/LIMITATIONS

- Working time and cure time will decrease as the temperature increases, and will increase as the temperature decreases
- Install DURAL HS GEL with a high quality, professional grade gun with a gear ratio of at least 26:1 for ease of application and best results
- Do not thin DURAL HS GEL as this may affect cure and performance
- DURAL HS GEL will discolor upon prolonged exposure to ultraviolet light and high-intensity artificial lighting
- Not recommended for any overhead application where there may be a sustained tensile load
- For anchoring applications, concrete must be a minimum of 21 days old prior to anchor installation
- Performance characteristics, such as seismic and long term load resistance, were tested in accordance with ASTM E488-96 (2003) & E1512-01 (2015) provisions and not that of ACI 355.4, and are therefore not applicable in the concrete tension zone. Always consult with a design professional prior to use to ensure product applicability
- In all cases, consult the product Safety Data Sheet before use
